GUIDE  
2024

SCOTTISH  
UNIVERSITY  
OF THE YEAR

## Who Am I?

- Abridged history ...
  - BSc (hons) in Computer Science
  - Worked in industry as a software engineer
  - Got a PhD in Artificial Intelligence
  - Teacher/Lecturer at Strathclyde and Caledonian Universities
  - Moved to industry with Rakuten Mobile
    - Academic collaborations on Autonomous Networks
  - ... and now back to academia

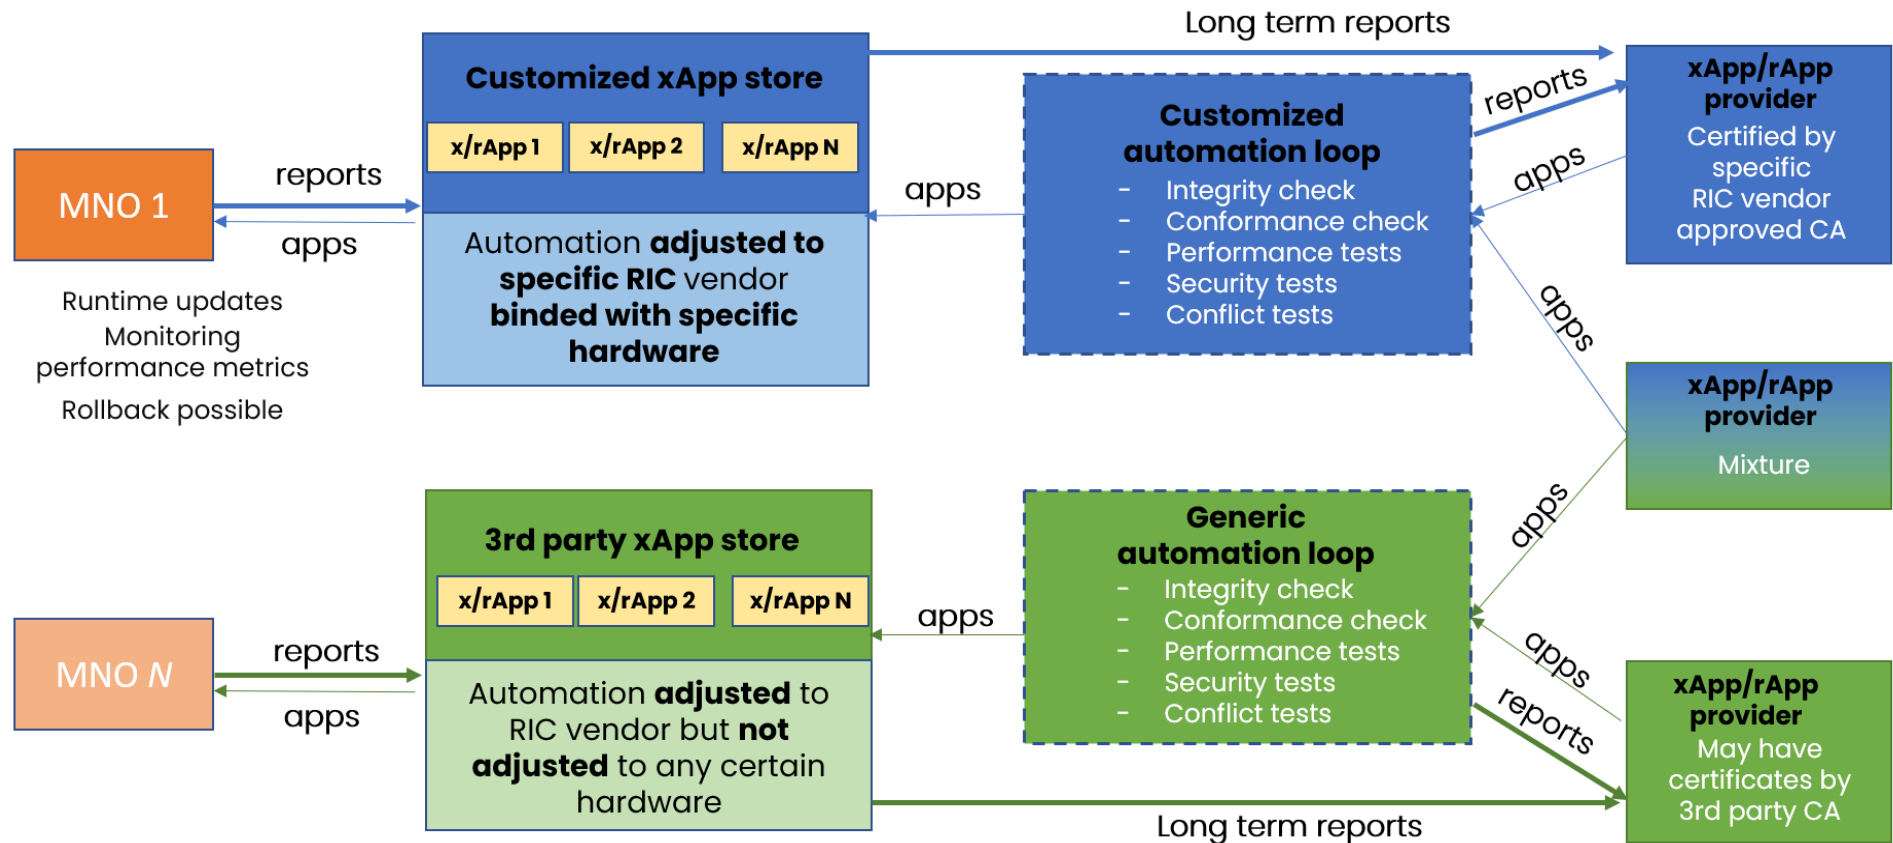

## What Am I Doing?

- I am a research associate here at the **University of Glasgow**
- Still in the field of Autonomous Networks
- The current goal is to create an App Store for xApps
  - **Funded by EPSRC IAA award EP/X5257161/1**
  - xApps are "cross-layer applications" that (hopefully) make mobile networks run smarter and more efficient

# Towards Autonomous Open Radio Access Networks

## xApps

- **xApps are intended to implement RAN functions: -**
  - **Dynamic optimisation**
  - **Closed-loop automation**
  - **Service differentiation**
  - **Load balancing**
  - **Mobility**
  - **Energy efficiency**
  - **Coverage optimisation**

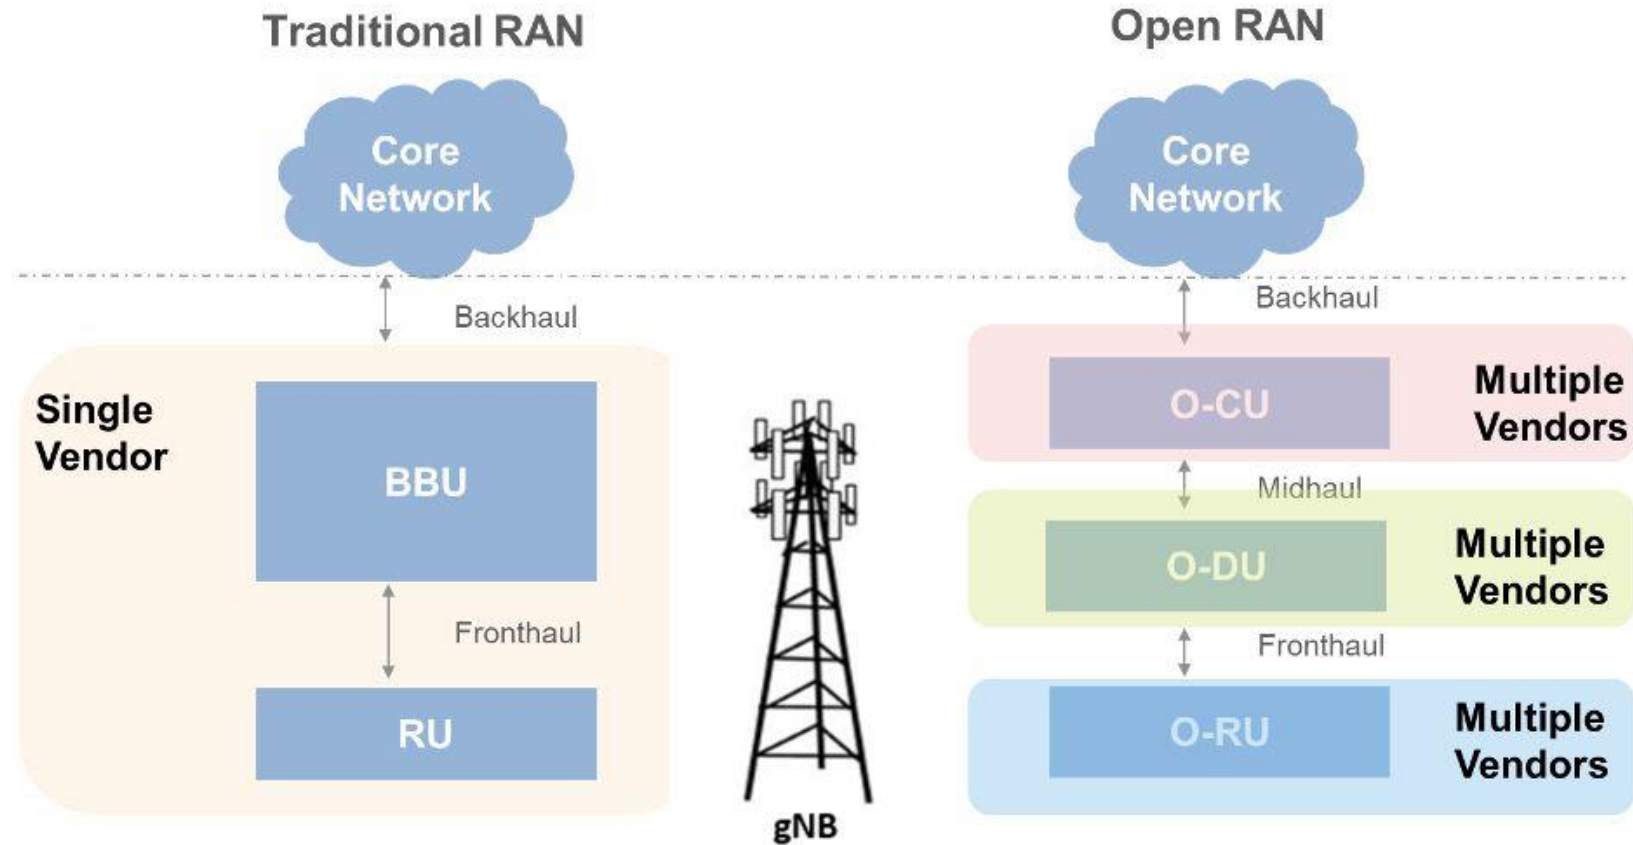

# Open RAN

- **Open Radio Access Network**
- A paradigm shift in the telecommunications industry
  - Away from single-vendor, monolithic solutions
  - To multi-vendor, modular solutions
- Open and flexible
- Lower barrier to entry and TCO
- Scalable

# A Quick Comparison

# Key O-RAN Features

- **Open Interfaces**
  - Interoperability and Compatibility
  - Mix and Match components
  - "Off-the-shelf" components
- **Virtualisation**
  - Emphasis on software-based solutions running on standard hardware
  - Software Defined Networks (SDN)
  - Network Function Virtualisation (NFV)
- **Cloud-Native Architecture**
  - Micro-services, containers, resource allocation, cost effectiveness

## O-RAN Alliance

"O-RAN ALLIANCE is a world-wide community of mobile operators, vendors, and research & academic institutions with the mission to reshape Radio Access Networks to be more intelligent, open, virtualized and fully interoperable."

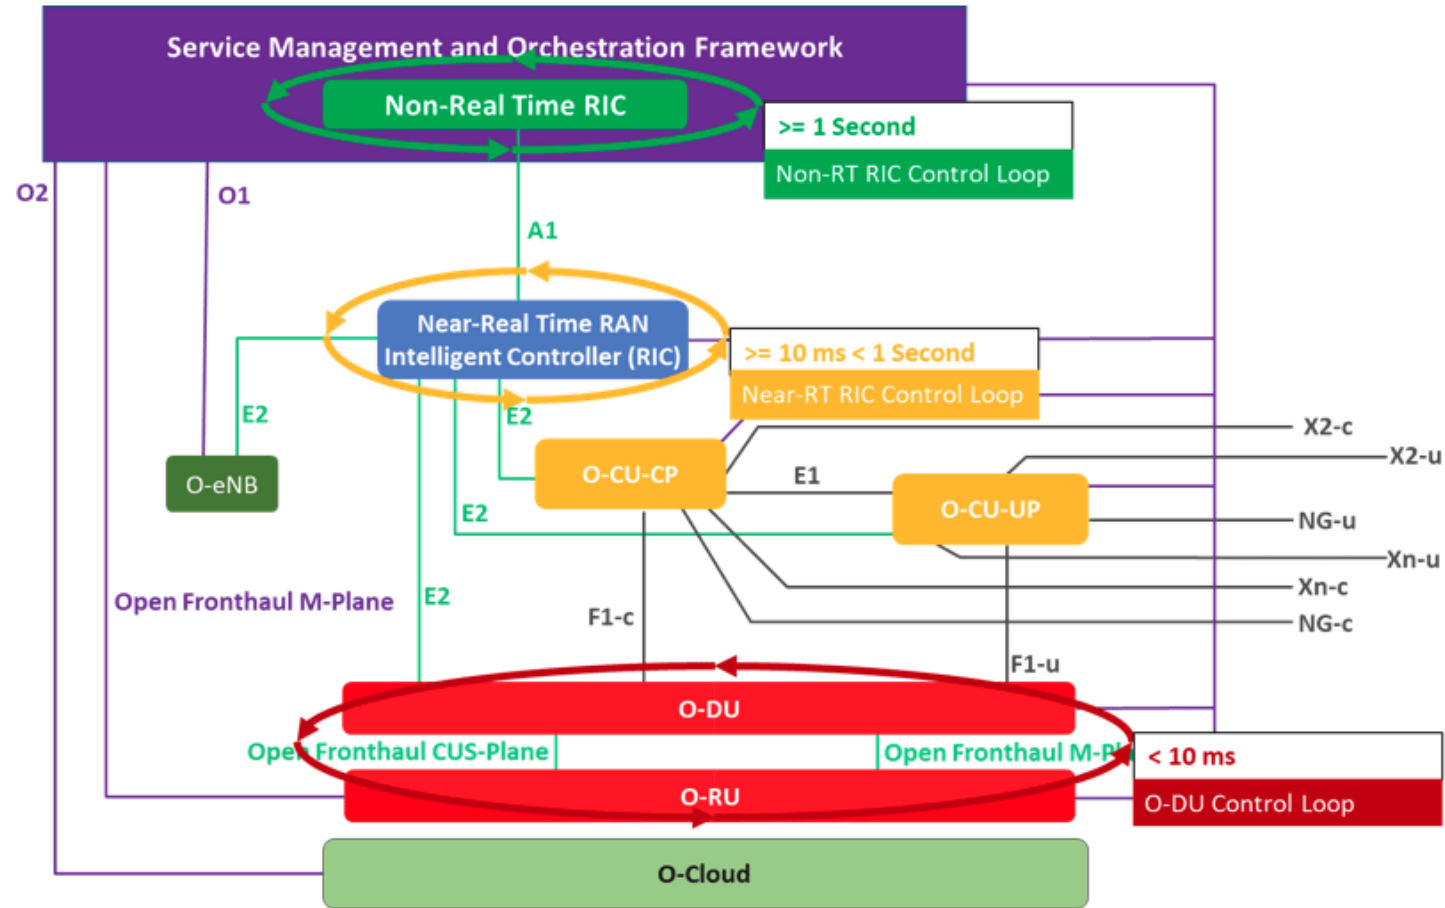

# High-level Overview of O-RAN

- Radio Unit (O-RU)
- Distributed Unit (O-DU)
- Centralised Unit (O-CU)
- (Near) Real-Time RIC (rtRIC)
  - This is where xApps live
- Non-Real-Time RIC (ntRIC)
  - This is where rApps live

## Conclusions

- O-RAN offers a more open and inclusive alternative to vendor-specific solutions
- xApps are an important part of an O-RAN solution
- xApps afford the ability to introduce intelligence into the network
  - Bringing us closer to autonomous networks
- xApps do not need to be built by telcos
  - Specialist xApp developers/providers
  - Provided to telcos via an App Store
